

MATTHEW K. DUNN

BRYAN SELKIN, M.D.

Dermatology

Dr. Bryan Selkin treats patients of all ages for a wide variety of skin concerns, from acne and warts to the most severe skin diseases and genetic disorders. Using an advanced protocol and system, skin checks are done with the goal of carefully documenting new or changing lesions and taking action early when necessary. Dr. Selkin believes patient education and involvement are the keys to skin health. His state-of-the-art office has dedicated areas for medical dermatology, surgical procedures, and cosmetic procedures. The Center for Dermatology and Cosmetic Laser Surgery is among the area's leading providers of phototherapy. Common skin conditions, such as psoriasis, vitiligo, and eczema can frequently be controlled without the need for oral medications, which can produce side effects on internal organs. Dr. Selkin uses the newest, safest, and least invasive lasers and light sources for conditions such as pre-skin cancer, sun damage, wrinkles, sagging skin, red and blue veins on the face or body, and acne scars.

Dr. Selkin attends many national meetings and keeps up with the latest advances in his field. He graduated from and was educational chief of the Harvard residency program in dermatology. He also did additional fellowship training at Harvard in the newest clinical trials in dermatology. He is board certified in dermatology and a member of the American Academy of Dermatology. Dr. Selkin and four other full-time providers see patients in their Plano and McKinney offices that offer convenient parking and Saturday hours. The Plano location has more than 10,000 square feet of space to offer patients comprehensive, high-quality dermatology services.
