

**M**y name is Dr. Christina.  
I'd like to tell you about  
a cool laser that I'm using to treat  
patients of all ages—it's called the  
Waterlase MD™. The Waterlase MD  
uses a combination of water and  
lasers to treat everything from  
cavities to root canals without the  
need for a drill or anesthetic.\*

*Let's go over all the amazing  
benefits of Waterlase Dentistry  
for you and  
the whole  
family!*

FEATURING WATERLASE DENTISTRY

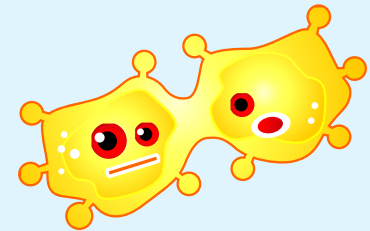

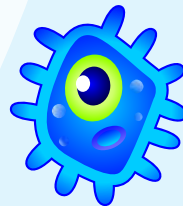

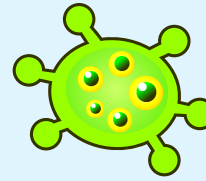

**Going to the Dentist has  
never been more fun!**

**"I am a Waterlase dentist** because I care about you—my patient. Waterlase Dentistry treatments improve your comfort and provide better results from dental procedures. In addition, Waterlase Dentistry treatments give you important advantages over conventional treatments using needles and drills."

## What are the benefits of Waterlase Dentistry?

- The Waterlase MD avoids the trauma of the drill to preserve more healthy tooth structure.
- Waterlase treatments can avoid the needle, meaning faster treatments and no uncomfortable after effects like a numb lip or tongue.
- Waterlase treatments are more comfortable, reducing stress and anxiety.
- The Waterlase supports the concept of conservative dentistry. There is enough retention from the Waterlase so the dentist only needs to remove the decay and the filling material will stay strongly in place.
- Waterlase treatments may not require anesthetic, thus the patient is able to let the dentist know that their bite is perfect.
- Since the patient is not numb with the Waterlase, the patient can eat and drink immediately after the procedure.

## Is Waterlase Dentistry safe?

Waterlase Dentistry is one of the most advanced dental technologies available today. It was developed by BIOLASE Technology, the leader in dental lasers. BIOLASE dental lasers have been used to treat millions of patients.

Waterlase Dentistry was developed specifically to repair decayed and damaged teeth, and treat gum and other soft tissue in the mouth, safely and comfortably. It can be harmful to eyes, however, so you and anyone else in the treatment room must wear special protective glasses.
